

## Jaguars (Big Cats)

A jaguar watches silently from a rain forest tree as prey draws near below. When the jaguar leaps, its too late for the prey to escape. The jaguar has its lunch. Learn more about these stealthy cats, including where they live, what they hunt, and how they live from day to day.

The Jaguar (*Panthera onca*), is a New World mammal of the Felidae family. It is one of four big cats in the *Panthera* genus, along with the tiger, lion and leopard. For starters, jaguars live in Central and South America, where they are the largest big cats, while leopards are the smallest big cats in their range. **JAGUAR Common Name(s): Jaguar Scientific Name: *Panthera Onca*** . Unlike many other big cats, apart from man, the jaguar has no rivals - no other predator. The Jaguar is sometimes called *Onca* by South Americans and *El Tigre* (the tiger) by Central Americans. Long ago, they called it *Yaguara*, the cat that kills with jaguars. Jaguars are the largest of South America's big cats. They once roamed from the southern tip of that continent north to the region surrounding the U.S.-Mexico border. Jaguars differ from all the other cats in their method of killing. Once they've caught their prey they pierce the skulls with their canines, demonstrating the amazing strength of a top-level carnivore, the big cat helps prevent overgrazing of vegetation by keeping its prey populations in balance. Jaguars are also important in human history. Your best source for quality Jacksonville Jaguars news, rumors, analysis, stats and scores from the fan perspective.
